

Amendments to the Claims:

Please amend the claims as shown below. This Listing of Claims will replace prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A method ~~executed by~~ implemented on a server for ~~notifying a state of printing processing, the method being applied to a printing system in which the~~ a server is capable of communicating with a client device and a printer device through a network, the method comprising:

~~receiving generating data in accordance with a printing request received~~
from the client device;

transmitting ~~the print data generated to the printer device~~ in accordance with the received printing request; and

transmitting, to the client device, information for causing the client device to acquire ~~acquiring a Web page indicating a state of processing of a the transmitted print job, the Web page being provided by the printer device~~ data.

2. (original) A method according to Claim 1, further comprising authenticating that the printing request is a printing request from a valid user.

3. (currently amended) A method according to Claim 1, wherein the printer device combines print form data and the print data transmitted by the server ~~generated by the server~~ in order to generate image data for printing ~~and prints the image data generated~~.

4. (currently amended) A method according to Claim 1, wherein the information for causing the client device to acquire ~~acquiring the Web page~~ ~~indicating the state of processing of the~~ transmitted print data job comprises a uniform resource identifier of a Web page indicating the state of processing of the transmitted print data ~~identification information indicating the Web page~~.

5. (currently amended) A method according to ~~Claim 1~~ Claim 4, wherein the client device displays the state of processing of the print ~~job~~ data in a Web browser in accordance with the Web page acquired by ~~transmitted to the client device~~.

6. (currently amended) A method executed by ~~implemented by a server~~ for ~~notifying a state of printing processing, the method being applied to a printing system in which the~~ a server is capable of communicating with a client device and a printer device through a network, the method comprising:

receiving ~~generating data in accordance with a printing request received from a Web browser of the client device~~;

transmitting the data generated to the printer device;

acquiring a Web page indicating a state of processing of ~~a the transmitted~~ print ~~data~~ job, the Web page being provided by the printer device; and

transmitting, to the client device, the acquired Web page ~~acquired~~.

7. (currently amended) A method according to Claim 6, wherein the client device displays the state of the printing processing in ~~a the~~ Web browser in accordance with the Web page.

8. (currently amended) An information processing device capable of communicating with an external device and a printer device through a network, the information processing device comprising:

a request data-receiving unit configured to receive ~~generation means for generating data in accordance with a printing request received from the external device;~~

a data transmission unit configured to transmit ~~means for transmitting the print data generated in the data generation means to the printer device in accordance with the printing request received by the request receiving unit;~~ and

a transmission unit configured to transmit ~~means for transmitting, to the external device, information for causing the external device to acquire~~ acquiring a Web page indicating a state of processing of a ~~the print data transmitted by the data transmission unit~~ job, the Web page being provided by the printer device.

9. (currently amended) An information processing device according to Claim 8, further comprising an authenticating unit configured to ~~authenticate~~ means for authenticating that the printing request is a printing request from a valid user.

10. (currently amended) An information processing device according to Claim 8, wherein the printer device combines print form data and the print data transmitted ~~generated by the data transmission unit~~ server in order to generate image data for printing ~~and prints the image data generated.~~

11. (currently amended) An information processing device according to Claim 8, wherein the information for causing the external device to acquire

~~acquiring the Web page indicating the state of processing of the transmitted print data job comprises a uniform resource identifier of a Web page indicating the state of processing of the transmitted print data~~identification information
~~indicating the Web page.~~

12. (currently amended) An information processing device according to ~~Claim 8~~Claim 11, wherein the external device displays the state of processing of the print ~~data job~~ in a Web browser in accordance with the Web page acquired by the external device.

13. (currently amended) A computer-readable medium having a program stored thereon for controlling a computer of a server capable of communicating with an external device and a printer device, the program causing the computer to execute a method comprising:

~~receiving generating data in accordance with a printing request received~~
from the external device;

~~transmitting the print data generated to the printer device in accordance with the received printing request; and~~

transmitting, to the external device, information for causing the external device to acquire~~acquiring a Web page indicating a state of processing of the a transmitted print data job, the Web page being provided by the printer device.~~

14. (currently amended) A ~~program~~computer-readable medium according to Claim 13, wherein the method further comprises authenticating that the printing request is a printing request from a valid user.

15. (currently amended) A ~~program~~computer-readable medium according to Claim 13, wherein the printer device combines print form data and the print data transmitted~~generated~~ by the server in order to generate image data for printing~~and prints the image data generated~~.

16. (currently amended) A computer-readable medium~~program~~ according to ~~Claim 13~~Claim 15, wherein the information for causing the external device to acquire~~acquiring the Web page indicating~~ the state of processing of the transmitted print data job~~comprises a uniform resource identifier of a Web page indicating the state of processing of the transmitted print data~~identification information indicating the Web page.

17. (currently amended) A computer-readable medium~~program~~ according to ~~Claim 13~~Claim 16, wherein the external device displays the state of processing of the print ~~job data~~data in accordance with the Web page acquired by the external device.
